Telegraph office
Dominion Lands Agency

Note: Peace river is the boundary between Peace River and Grande Prairie land districts.

LEGEND

OPEN OR SEMI-OPEN LANDS
Open prairie or park lands, or lands covered with light brush, or lands with scattered clumps of light woods.

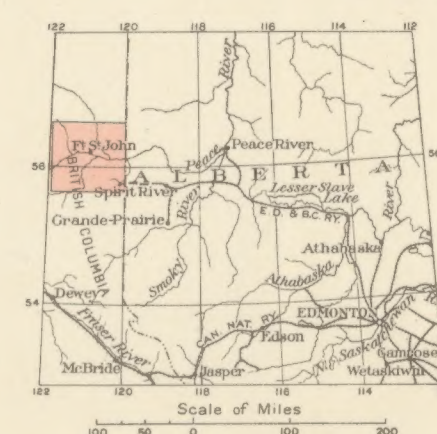

LANDS WITH A LIGHT FOREST COVER
Lands covered with brush, or small scattered trees, or lands which have been repeatedly overrun by fire, and now with scattered, standing, dead trees and partially decayed windfalls intermingled with a light growth of saplings. Such lands are easy to clear.

LANDS WITH A MEDIUM FOREST COVER
Lands covered with a medium stand of trees, generally poplar, up to eight inches in diameter, or brush with areas of windfall and generally restocked with young trees. Such lands can be economically cleared.

LANDS WITH A DENSE FOREST COVER
Lands covered with a dense growth of poplar trees and underbrush, or old brush with considerable partially decayed windfalls and a dense second growth, or timbered lands partly overrun by fire and now with heavy windfalls and alternating areas of standing, green timber, much of which is of use for building and other purposes. Such lands are very difficult to clear.

TIMBER LANDS
Lands covered with spruce, poplar and lodgepole pine, up to twenty-four inches in diameter, most of which is of commercial value.

SWAMP OR MARSHY LANDS
Spruce and tamarack swamps, grassy marshes and open bogs; also low wet areas or lands liable to flooding which when drained will provide a limited quantity of wild hay.
